Abstract (en)

[origin: EP0407266A1] Protective lining for an elongate structure, such as a pipe (4), an electrical or optical cable, a pneumatic or hydraulic pipeline. <??>The lining according to the invention is characterised in that it comprises: - a first plurality of layers (1a-1c) made from non-organic material, having a structure suitable for trapping air whilst allowing the said elongate structure to remain operating at relatively high temperatures, of the order of at least 850 DEG C, and for a given period of time, of the order of at least several minutes, and - a second plurality of layers (2a-2b), each of these layers being arranged alternately with respect to each of the layers (1a-1c) of the first plurality, in such a way that they are on the inner side, and being produced from a material forming a substantial barrier to the air trapped in the corresponding layer of the first plurality. <??>Application to opto-electronic, hydraulic industries etc. for protecting pipelines against fire.
