Abstract (en)

[origin: EP0407272A1] Washing machine with improved rinsing and low water consumption, characterised in that it comprises, at the end of each of the rinses of its rinsing cycle and during an emptying of its tub (3), an intermediate spinning of the laundry at a selected high speed, an interruption of this intermediate spinning as soon as a formation of a foamy emulsion reaches a predetermined order of magnitude, and the resumption of this spinning after a discharge of this foamy emulsion by an emptying pump, this interruption and this resumption being repeated until this intermediate spinning of the laundry can be carried out at the selected high speed. <IMAGE>
