Abstract (en)

[origin: EP0407290A1] The invention relates to an air siphon of the type comprising a cylindrical porous body (2) made from terra cotta in which is provided a longitudinal principal channel (3) emerging at the end faces (4, 5) of the said porous body (2). In addition it comprises a secondary conduit (13) emerging via a first orifice (21) in the vicinity of one end face (4) of the said porous body (2) and emerging via a second orifice (14) in the portion of the principal channel (3) located in the vicinity of the other end (5) of the said porous body (2). It also comprises means (17) enabling the cross-section of the second orifice (14) to be adjusted. <IMAGE>
