Abstract (en)
[origin: WO8908588A1] A tamper evident band (16) is provided around an area of cooperation between a container mouth (18) and a closure cap (11). Sloping faces (15) and (24) on the container and cap respectively allow the cap, surrounded by the strip (16) to be pushed on to the container, but shoulders (14) and (23) prevent subsequent removal of the cap without first removing the band (16). When the band (16) is removed, the cap can expand radially when pulled upwardly to release the engagement between the shoulders (14) and (23), and so allow removal of the cap. The cap and band (16) may be moulded together from a plastics material, with the band (16) depending from the edge of the cap and being attached thereto by a frangible portion (17, Fig. 1). At some point prior to, or during the assembly with the container, the frangible portion is broken and the band (16) moved to surround the cap as shown.
