Abstract (en)

[origin: JPH0339739A] PURPOSE: To obtain a solid state modified material capable of being easily applied and rapidly dissolved by incorporating an iron (III) complex or a salt of the iron (III) complex and a rehalogenating agent in a granulated form having 150-3000µm average particle diameter. CONSTITUTION: The color photographic bleaching agent contains an iron (III) complex or the salt of the iron (III) complex and a rehalogenating agent in the granulated form having 150-3000µm average particle diameter and is capable of freely being applied without dust, keeping the shape for a long period and being dissolved in water within 45sec at 25 deg.C to form a directly used solution. As a result, the solid state modified material of the color photographic bleaching agent, which is easily applied and rapidly dissolved, is obtained.
