Abstract (en)
A device for waste disposal comprising a bin (1) having a bottom (6) and an upright sidewall (10) provided with means for detachably securing the bin (1) between two supporting beams (2, 3) that can be vertically arranged, the bin (1) being provided near its bottom (6) with two strip-shaped wings (8, 9), which are arranged diametrically opposite each other, project from the sidewall and can each be received by a hollow bush (11, 12), which is connected to the supporting beams and whose wall is interrupted at one area so that the relevant strip-shaped wing can be passed through this perforation into and out of the bush, the bin being further provided near its upper edge with two further wing-shaped strips (16, 17), which are arranged diametrically opposite each other, are rotatably connected to the sidewall (2) and can each be received by a hollow bush (18, 19), which is connected to each of the supporting beams and whose wall is interrupted at one area.
