Abstract (en)

[origin: EP0408348A2] A system for monitoring the exposure of a consumer to advertisements in the print, radio and television media in an automated manner. Likewise, the purchasing habits of the same consumer are monitored in, for example, a supermarket, also in an automated manner. The record of purchased items and the results of monitoring the exposure by the consumer to advertisements are combined to obtain an analysis correlating the advertisements to which the consumer was exposed with the goods eventually purchased by the same consumer.
