Abstract (en)

[origin: EP0408784A1] A blocking device for a turn-and-tilt fitting, having an actuating rod (3) guided longitudinally behind a cover plate (2) located in the rebate, is equipped with a lock cylinder (1). A commercially available profiled half-cylinder can be used for this if the cover plate (2) and the actuating rod (3) are guided at the edge by a fitting housing (4) which is fixed to the cover plate (2) and in which the lock cylinder (1) is fastened, and if there is mounted a cross-bolt (8) which is actuable by the locking nose (7) of the lock cylinder and which can be introduced at one free end (9) into an associated rod recess (10) in at least one predetermined position of the actuating rod (3). <IMAGE>
