Abstract (en)

[origin: EP0409019A2] A colour-photographic recording material which, in the usual way, contains for each of the main spectral regions blue, green and red in each case at least one light-sensitive silver halide emulsion layer and couplers for producing part colour images in complementary colours and which additionally is also spectrally sensitised for light from the gaps between in each case two adjoining main spectral regions and can also produce part colour images in complementary colours thereto, is suitable for improved colour hue rendition.
