Abstract (en)
[origin: EP0409739A1] The radiator for central heating comprises a number of hollow radiating elements (2) arranged so as to form a row, the ends of the radiating elements (2) being connected respectively to a first and to a second collector (3, 4) which are opposite and comprise orifices (16, 17) which communicate with corresponding orifices (14, 15) of the radiating elements. The radiating elements are fixed to the collectors by welding around the orifices. The collectors (3, 4) have a generally triangular outline and said communicating orifices (16, 17) of each collector (3, 4) are arranged in a part forming an edge of the latter. <IMAGE>
