Abstract (en)

[origin: EP0410140A1] A cover (5) for closing retaining chambers (3) for overvoltage suppressors (4) of a protector connector (1) is curved convexly in the form of an arc towards the retaining chambers and is constructed in a resiliently elastic manner. The cover (5) is anchored at both ends to the protector connector (1) and in this case rests flush on the protector connector (1). In consequence, the protector connector can be of narrow design and can be easily opened and closed. <IMAGE>
