Abstract (en)
[origin: EP0410322A2] A method of developing a silver halide photographic material is disclosed., The method comprises a step of supplying a developer to a surface of an exposed silver halide photographic material, which is transferred by at least one pair of rolls, intermittently at least twice wherein an interval time of each supplying is not less than 10 seconds. The method provides a compact developing system, which is free from uneven development with good graininess of the image.
