Abstract (en)

[origin: EP0410369A2] The present invention relates to an articulation structure between shutters and supporting frames particularly in facades of buildings and the like which is composed of a transverse profiled element (1) which is rigidly associated with the fixed structure and has a curved protrusion (2) which can be engaged by an open seat (15) defined by a profiled frame element (3) which supports a plate-like element (5).
