Abstract (en)

An equipment for cooling quickly liquids in containers has a first tank (11) containing a coolant (12) and a second tank (13) containing at least one container (14) with the liquid to cool. The tanks (11, 13) are connected by a pipe (23) which is meant to feed the coolant (12) from the first tank (11) to the second (13) one by means of first motor means (21). A second pipe (25) connects the two tanks (11, 13) for recycling the coolant (12) from the second tank (13) back to the first one (11). Second motor means (15, 16) keep the coolant (12) to prefixed temperatures and means (22, 19) are provided to activate the two motor means (21, 15, 16).
