Abstract (en)

[origin: JPH03167324A] PURPOSE: To maintain a prescribed operating speed and target quality of textile machines by measuring at least one quality of fiber structures with the plural textile machines of respective regions and feeding back this quality by a specific system. CONSTITUTION: The at least one quality of respective produced fiber structure is measuring by the plural textile machines of the respective regions and the measured quality is used for controlling the respective textile machines or the previous machines of the same regions. A correction value is formed from at least a plurality of the quality measured in the previously spinning process and the spinning regions and is used to control the operations of the textile machines of the previous regions.
