Abstract (en)

The invention relates to a method for delivering a liquid from a chamber via a passage which can be closed by a closing means. When said passage is being opened, the fluid is set in motion by vibrating the fluid present in the chamber. The method can be performed by a dosaging device for delivering a fluid, said dosaging device being provided with a chamber having a passage which can be closed by means of a closing means. Further there are provided by means by way of which parts of the device being in contact with fluid present in the chamber can be set into vibration.
