Abstract (en)
[origin: US4943005A] An improved rotary paint atomizing device of the type having an internal chamber for receiving paint from a paint feed tube extending coaxially through a drive shaft which rotates the device at a high speed. An annular insert is clamped between the drive shaft and the device for forming a rear wall of the paint receiving chamber. The insert prevents paint from splashing into the annular space between the rotating drive shaft and the stationary paint feed tube. When the device is removed from the shaft. The separate insert permits easy access to the paint receiving chamber for cleaning.
