Abstract (en)
[origin: EP0410887A1] The palletised container is produced in wood and it comprises a pallet-type base and surrounding walls (3). This pallet is characterised in that it comprises a structure in the form of a brace between the surrounding wall (3) and the base (2) so as to prevent any deformation of the corresponding wall during handling of the palletised container by a fork-lift truck. This structure in the form of a brace is obtained by assembling the edge (13) of the base with the lower plank (9) of the corresponding surrounding wall. These wooden palletised containers are particularly used for gathering fruit in orchards. <IMAGE>
