Abstract (en)
[origin: EP0410937A1] The dispensing package comprises a bag (1), in which the items (2) of the packaging product form a stack. Said stack (2) rests on a bottom part (10) of the bag and said bottom part (10) has at least one separable portion (12). Said bottom portion (12) is separated from the remaining part (11) of the bottom (10) with the aid of a weakening or separation cut (13). Constructed in the separable bottom portion (12) is a further separable portion (15), the latter being separated from the first bottom portion (12) with the aid of a further weakening or separation cut (16). A dispensing package of this type can be opened easily and it then remains open for removing further items from the packaging product without the items remaining in the package becoming soiled or falling out of said package. <IMAGE>
