Abstract (en)

[origin: EP0410944A1] A drainage device, particularly for a water jet massage pool, comprises a control valve (6) in communication with the drain (14) of the pool (1) and with the suction side of a pump, to produce the turbulent circulation of the water and perform the water jet massage and a gate member (23) in the valve, being remotely controlled, to be moved from a first position of open communication with the drain and the pump, a second position of open communication with the pump and shut off communication with the drain, and a third position of shut off communication with the pump and with the drain, intermediate positions between said second and said third position enabling a partial regulatable opening of the communication with the pump, while keeping the communication with the drain closed (Fig.1).
