Abstract (en)

[origin: WO9009244A1] Arrangement for the projection of a controlled-flow coating product which makes possible a rapid change of said coating product. According to the invention, two dispensing arms (200a, 200b) are arranged parallel, each comprising an intermediary container (212a, 212b) having a piston or a membrane defining an operating chamber (246a, 246b) driven by a liquid, said arms being connected by means of valves located between a unit for changing the coating product (211) and at least one device (213) for projecting the coating product. Application: for the electrostatic projection of conducting coating products.
