Abstract (en)
[origin: EP0411279A1] In order to achieve increased compression stability and strength, tight closure on all sides, good stackability and accessibility to the contents both from above and from the side in a folding box with a swivellable pouring flap (30), it is proposed to construct the bottom (6, 12) of the folding box to have multiple walls and to provide both the interior and the exterior with continuously closed, flat surfaces and to provide a hinged lid (17) in addition to the pouring flap, which hinged lid is connected swivellably to one of the multiple-walled side parts of the box. The folding box is particularly suitable for storing and making available small items of any type, e.g. nails, screws and the like. <IMAGE>
