Abstract (en)
[origin: EP0411453A1] The invention relates to a device for emptying a barrel (1) containing highly viscous material by pressing in a plunger (9). To prevent deformation of or damage to the barrel (1), the device comprises a turntable (2) on which the barrel (1) can be placed. The barrel can be supported at its outer periphery by means of a flexible entwining element (23) which can be reeled off a drum (24) or wound thereon. <IMAGE>
