Abstract (en)

[origin: EP0411478A1] In order to avoid stiffening of a downhill ski due to the ski boot and the ski binding in the binding region, the binding is mounted by means of spacers (17) on a thin metal plate (3) which is provided separately in the ski and which is mounted on the ski core (1) so that it floats in the ski via interposed thin layers of rubber (11, 12). The spacers (17) hold the binding elements (8) with spacing from the surface of the ski and do not transfer forces from the torsional frame (2) of the ski onto the binding and vice-versa. <IMAGE>
