Abstract (en)

[origin: EP0411647A1] Method for producing needed, structured and patterned textile velour webs from fibre fleeces and textile fibre material by applying to a single- or multi-layered preneeded fibre fleece web at least one patterning ply of textile fibres, in particular staple fibres, which differ from the fibres of the carrier web in respect of colour and/or shape and/or material and/or fineness and/or orientation over the whole or part of the area, and finally subjecting this web to a further single- or else, if desired, multi-stage needling for the purpose of patterning or structuring, wherein the fibres applied to the carrier web are pressed through the web until visible on the underside of the web, the piles thereof lying essentially in the plane of the lower surface of the web.
