Abstract (en)

[origin: EP0412669A1] A panel assembly comprising a panel (42) having a front face and a back face, a frame (36) surrounding the panel, first (48) and second (46) longitudinal wedge-shaped packing elements which are disposed between the frame and the panel and which include engaging means preventing the elements from moving down each other, the first packing element (48) being held against transverse movement with respect to the frame (36), the second packing element (46) having an upstanding portion (54) which faces the front face of the panel and being held against movement in a first direction, which first direction extends from the panel towards the upstanding portion of the second packing element, by engagement of a surface of the first packing element (48) with a surface of the second packing element (46), and the assembly including means preventing movement of the second packing element (46) in a second direction which is opposite to the first direction.
