Abstract (en)
[origin: EP0412890A1] The invention relates to a highlighting (display-type) device intended to be fixed so as to rest against an edge (17a) of a kerb structure or element (17), such as a crash barrier or a low wall separating traffic lanes. According to the invention, the part (3) by means of which the device rests against the edge (15) of the element or the structure comprises positioning ribs (9b) directed towards the said edge and of which the free portion (13), via which it rests, has at least locally a shape corresponding to that of this same edge. The device may, in particular, be fixed with the aid of spring clips (29). The invention applies to the signalling of crash barriers and kerb low walls. <IMAGE>
