Abstract (en)

[origin: EP0413196A2] Jugs made of fragile material are provided with a plastic mouth edge to reduce the susceptibility to breakage. For cost reasons, the jug handle is then connected to the plastic edge. The connection between the plastic edge and the jug must accordingly be of very sturdy and precise construction since this connection can otherwise become detached during use. In the new hotel jug, the production costs are to be low and the attachment of the plastic edge is to be as simple and durable as possible. <??>In order to obtain a durable connection between the plastic edge of a jug, in particular a glass jug, and the handle of the jug, the plastic edge and the handle are attached separately from one another to the outside of the jug. The plastic edge and the handle are preferably made of different plastic materials and are correspondingly attached with different adhesives, it also being possible for the plastic edge to be mounted on the edge of the jug by simple engagement. <??>The hotel jug can be used, in particular, in the commercial sector, i.e. in restaurants and hotels. <IMAGE>
