Abstract (en)

[origin: WO8910693A1] Disclosed are arthropodicidal solutions for application to plants comprising, as an active ingredient, arthropodically active mono alpha carboxylic acids, of hydrocarbons having 8 to 20 carbon atoms, and/or monovalent metal salts thereof. The arthropodicidal activity of these fatty acids is potentiated by including in the solution an agent capable of sequestering metal ions such as one or a mixture of chelating agents, sequestering agents, and surfactants.
