Abstract (en)

[origin: WO9000917A1] The invention relates to a device for fitting ski bindings in which the clamp body is detachably secured to the upper side of a ski by means of screws. In order to ensure that the clamp body is securely fixed on the ski without reducing the flexibility of the ski itself, the invention provides for the incorporation in the body of the ski (103) of a securing plate (101) with several threaded bushes (102) to take the threaded parts of the securing screws (106).
