Abstract (en)
[origin: EP0413936A1] In a padded bed, consisting of a base (10), constructed as bedstead, a lower sprung part (6), supported on the base (10) and bearing a mattress (7), and a panel (8) surrounding the mattress (7) and the lower sprung part (6), the lower sprung part (6) extending beyond the base (10) at the foot end and at the longitudinal sides and having vertical spacing from the upper edge of the base (10) in the region of the foot part and the head part, individual support elements (5) are provided between the side walls (12) of the bedstead and the lower sprung part (6), which elements are distributed at intervals over the periphery of the lower sprung part (6) and which bear the lower sprung part (6) and space the latter away from the upper edge of the side walls (12) of the bedstead over its entire periphery and which also determine a lateral spacing between the base (10) and the panel (8). <IMAGE>
