Abstract (en)

A davit movable relative to a board or a side of a ship or offshore rig between an inboard rest position and an outboard operative position for lowering a life raft, in particular an inflatable raft, by means of a winch through gravity. For this purpose according to the invention, the davit comprises a davit arm (2) mounted on a shaft (5) located inwardly of said board or side, for pivoting movement between said inboard position and said outboard position, and arranged so that in the inboard position, the centre of gravity of the davit arm (2) is located outboard of said shaft (5).
