Abstract (en)

[origin: EP0415054A1] The particular feature of the device is that it can be adapted to a firearm equipped with multiple cartridge magazines (7) connected removably by means of coupling members (3, 4, 30). It comprises, for this purpose, a lower part (1) intended to be fastened temporarily to a cartridge magazine (7) by means of coupling members (3, 4) paired with those of said magazine, and an upper part (2) provided with a telescopic lateral extension (5) retractable from its entry orifice (6) and intended to come in front of the aperture (8) for ejecting the cartridge cases from the body (23) of the firearm. To make it easier to transport the device, whilst at the same time reducing its overall size, the two parts (1, 2) of the container are telescopic. <IMAGE>
