Abstract (en)

[origin: EP0415290A1] A method and a device for controlling the working speed of a spinning machine, especially a ring spinning machine, having a plurality of spinning stations, at which yarn can be produced, the yarn breaks occurring being determined and the rotational speed of the spindle of the spinning stations being regulated as a function of the number of yarn breaks occurring per unit time, are characterised in that the actually existing yarn-break rectification capacity or a value corresponding to this is determined, and in that a preset desired value (226) for the rotational speed of the spindle is determined as a function of the number of yarn breaks per unit time determined and of the actually existing yarn-break rectification capacity. <IMAGE>
