Abstract (en)

[origin: EP0415860A1] The present invention relates to a display panel device having the shape of a prism, obtained from a sheet (1) of substantially rectangular shape, whose parts (10, 11) overlap in order to form one of the faces of the prism; this panel is characterised in that the said end parts (10, 11) each comprise a series of holes (3) which line up in pairs and in that the said holes (3) are adapted to receive elastic plugs (5) which provide the link between the two end parts (10, 11) of the sheet in order to form the face of the prism intended to come to bear on a support (S), and which serve as isolating blocks for the panel to bear on the said support (S). Display panels, especially advertising. <IMAGE>
