Abstract (en)

[origin: WO9011390A2] A composite element comprising a conductive organic product support having a polycyclic aromatic structure such as graphite, covered by a dibenz-ether polymer or a copolymer having the formula (I), $m = 0$ or 1 to 10 , $n = 0$ or 1 to 10 , $m + n \leq 10$. These elements can be used to absorb metallic cations present in an aqueous or organic solution.

Abstract (fr)

L'invention concerne un élément composite comportant un support en produit organique conducteur à structure polycyclique aromatique tel que le graphite, recouvert d'un polymère ou copolymère de dibenz-éthers de formule (I), dans laquelle $m = 0$ ou 1 à 10 , $n = 0$ ou 1 à 10 , $m + n \leq 10$. Ces éléments sont utilisables pour absorber des cations métalliques présents dans une solution aqueuse ou organique.
