Abstract (en)

A silver halide photographic light-sensitive material is disclosed. The light-sensitive material comprises a support, a hydrophilic colloid layer and a silver halide emulsion layer provided on a side of said support and a hydrophilic colloid layer provided on the back side of said support opposite to the surface the emulsion layer provided thereon, wherein the layer arranged at the outermost portion of the emulsion provided side of the support contains a kind of irregular-shaped matting agent having a particle size of less than 4 μm in an amount of from 4 mg/m² to 80 mg/m², and a kind of regular-shaped or irregular-shaped matting agent having a size of not less than 4 μm in an amount of from 4 mg/m² to 80 mg/m², and the outer surface of said layer arranged at the outermost portion of the emulsion provided side of the support has a surface smoothness degree of not less than 25 mmHg. The light-sensitive material is suitable for graphic arts use and has a highly matted surface for improving the ability of contact in a vacuum printing apparatus and top/back surface differentiation.
