Abstract (en)

[origin: EP0416915A2] Apparatus for perforating a well comprises at least one first gun (20) and second gun (22) with a time delay device (50) positioned therebetween in a housing (24) connecting first and second guns. The time delay device delays firing of the second gun (22) for a predetermined period after firing of the first gun (20) and also preferably prevents fluid communication between the first and second guns by closing off a central opening (26) through the housing.
