Abstract (en)
[origin: EP0416961A1] Goods-handling door of the type which can be raised comprising a flexible or articulated screen (1), if necessary with horizontal strengthening rods (2), which can be rolled up, folded in concertina folds or taken above the door, whose edges slide between the side walls (3A, 3B) of vertical slides whose spacing is substantially greater than the thickness of the screen and if necessary of the strengthening rods, means being provided for applying, in each slide, the edge of the screen against one of the side walls of the slide, characterised by applicators (4) each constituted by an element of elongated shape (5), each applicator being held elastically in the horizontal position by an elastic articulation (6) between one of its ends and a wall (3B) of the slide, the separation between the walls (3A, 3B) of the slide being greater than the length of an applicator, by a distance such that a passage remains having a width substantially equal to the thickness of the screen, and if necessary of a strengthening rod. <IMAGE>
