Abstract (en)

[origin: EP0416973A2] The cabinet comprises superimposed trays 1A, 1B, 1C... which rotate about a vertical axis 2. The trays have a sector-shaped cut-out. In the rest state, the cut-outs are superimposed in front of the access zone and thus form an open column. In order to gain access to a useful zone of a tray, it is made to rotate in order to make the sought zone appear in the open column. It is possible to take objects from that zone or to place objects in that zone. The pulling out of a drawer is avoided which is an obstacle in the drawn-out position. <IMAGE>
