Abstract (en)
[origin: EP0417355A1] A fall guard for a roof, comprising a number of clamping constructions which are to be clamped on the roof gutter and which each consist of an upper clamping member (5) and a lower clamping member (6). At least one of these clamping members is adjustable in the vertical direction. An upright (2) for attaching restraining means (1) is connected to each clamping construction. A very rugged attachment of the fall guard to a roof gutter can be obtained if both clamping members (5, 6) of one clamping construction are fitted to a bracket (4) which is intended to engage around the roof gutter in such a way that the clamping members grip on the bottom of the gutter.
