Abstract (en)
[origin: EP0417497A2] In order to support freshly printed sheets (3) without marking on a transfer drum (1) in rotary presses, the transfer drum (1) is provided on the drum circumference with bars (10) which extend parallel to the axis of the transfer drum (1), and on which a multiplicity of small round brushes (11) with ink-resisting bristles (12) are arranged closely adjacently over the width of the maximum sheet format so as to be easily rotatable. <IMAGE>
