Abstract (en)
[origin: EP0417621A1] The printed products (44) are introduced, in an overlapping formation (S) and at an angle in relation to the conveying direction (F), into the pressing gap which is delimited by two pressing rollers (22') which are preloaded in relation to one another. In this connection, the pressing roller (22') rolls off along the folded edge (46) in the course of the conveying on of the printed products (44), which leads to an especially good pressing effect. <IMAGE>
