Abstract (en)  
[origin: EP0417762A1] The invention relates to a supporting device for securing ceiling tiles (13) to a wall (4), having an angle profile (1) which possesses, in cross-section, a fastening leg (2) to be arranged on the wall (4) and a supporting leg (3) extending substantially perpendicularly thereto, and having a spring element (29) for clamping the ceiling tiles (13) against the supporting leg (3), the spring element (29) possessing a spring arm (30) and a fastening portion (31) bearing on the fastening leg (2). To simplify mounting of the ceiling tiles (13), provision is made according to the invention for the spring element (29) to be of such a construction as to lock into the angle profile (1). <IMAGE>
