Abstract (en)

[origin: EP0418145A1] The invention concerns a pressure element used for clamping parts to be machined comprising a casing (1) fixed on a work table and in which is disposed a part which moves in rotation about a horizontal axis and which is provided with a toothed sector (21) cooperating with an endless drive screw (4), the said moving part (2) comprising an arm (3) forming a lever whose end bears on the part to be machined. <??>According to the invention, the arm (3) is mounted in a removable manner in the said moving part (2) with the possibility of translation in a direction perpendicular to the axis of rotation of the said moving part (2). <IMAGE>
