Abstract (en)
[origin: EP0418964A1] A record carrier is disclosed carrying subcode information in addition to the main information. The subcode information comprises "copy" bits of alternating logic values to indicate that the recorded information is a copy. Moreover, a method and recording device (72) for obtaining such record carriers are described. Finally, a recording device (71; 72) is described, which comprises a detection circuit (85) which detects the presence of "copy" bits of alternating logic values in the received information, and which comprises a decision circuit (94; 95) for deciding whether recording of the received information is allowed depending upon the detection of the presence of the "copy" bits of alternating logic values.
