Abstract (en)

[origin: EP0419324A1] A conductor system (30), comprising one or two current loops (30c), respectively (30b), extending on either side of a plane of symmetry (PP') passing through an arc deflector (19) and through a fixed contact (5), is obtained by plastic deformation and bending of a flat part cut out from a metal sheet of conducting material in such a way that the material scrap is much reduced. <IMAGE>
