Abstract (en)

[origin: EP0419335A1] The subject of the present invention is a voting card characterised in that it is of the chip card or microprocessor card type and contains areas capable of receiving identification data and areas for storing voting rights, or voting areas, able to be activated, to be identified and to permit the validation of a vote and the neutralisation of the area concerned. It also concerns a method of voting by the abovementioned card comprising an initialisation phase, a phase of choice of the candidate and of validation of the choice effected by the elector, the choice validated by the elector being stored in an area chosen at random and a phase of reading and of recording by the electronic ballot-box of the datum or data validated in the storage area or areas, this or these storage areas being neutralised. <IMAGE>
