Abstract (en)
[origin: WO8912917A1] The invention proposes a socket holder (1), which may, for example, be chased into the wall of a house (10), with at least one socket contact (3) secured in a socket plate (2), having at least one connecting wire (6) in braided form attached to the rear end of the socket contact and a flexible component arranged at the rear end of the socket contact which, with the socket holder assembled, presses the connecting wire (6) against the socket plate (2) and thus holds it firmly. The flexible component is in the form of a plate (13) covering the connecting wires (6).
