Abstract (en)
[origin: WO9104696A1] A Christmas tree stand (2) has a holder (6) arranged on a foot section (4) having securing components (14, 16, 18 and 20) to hold a tree and consisting in this embodiment of pivoted brackets which are pressed against the outer peripheral surface of the tree trunk via a central clamping device (46). To transmit the pressure from the clamping device (46) to the securing components (14, 16, 18 and 20), use may be made, for instance, of a steel cable (66) starting from the clamping device (46) which moves the securing components (14, 16, 18 and 20) with an adjustable, even pressure towards the Christmas tree trunk.
